			Thanks for constructing our relational database schema upon which I built our RESTful web service and CRUD test activities	Thanks for constructing our PowerPoint Slide for the presentation on Friday. Everybody gave it a thumbs up of approval seal.	Having someone in CIT who knows how to operator the projector and computer systems around campus is definitely useful when making sure we encounter no technical hiccups with the equipment for the presentation.	Thanks for adding back-end integration with our Sport Table to the Sport Selection Activity. Good luck on integrating Google Oauth with our back-end.	
		Good luck on your soccer game this Friday while we do our presentations ;D					

I'd say we're pretty good at communicating via Slack now. People seem to know to use @INSERTNAMEHERE to get someone's attention.

We're still never totally on topic during conversations, there's always tangential topics now and again.

I'd say we're functioning conflict-free throughout the semester. No clashing personalities that I've noticed.

We have Bolu, Caleb, and Ian C. on updating and maintaining the non-coding related activities for our project while me, Mark, and Ian A. update and maintain the coding related activities for our project.

There's some overlap as we've all contributed in some part to all aspects of the project, but for the most part that's how we've divided the work.

Numerically, it's not equal, but sometimes you get stuck on a bug that you can't fix for hours on end >_>. So, in the end, it evens out in terms of actual work done. I might have binged a little too much the past week, voluntarily.

We're all willing to answer questions when someone asks, as long as it's within our breadth of knowledge.

Scheduling conflicts are unavoidable. People's class schedule and other obligations sometimes prevent part of the team from showing up exactly on time. But, we manage to communicate what's going on to everyone in the end.

I'd say we're meeting deadlines pretty well so far based on instructor critiques and evaluations.

Passion is always mitigated by having to worry about 3-4 other classes and micro-managing time investment in each of our classes.
